

CULTIVATE CONSISTENCY

Fetal Bovine Serum

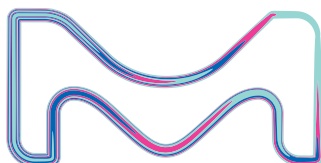

Fetal Bovine Serum (FBS) is the ideal cell growth supplement and generally preferred over other types of cell culture sera. Its high levels of nutrients and optimal combination of growth factors makes FBS the most effective cell growth promoter for virtually any cell culture system. In addition, the significantly lower content of antibodies in fetal sera compared to adult and newborn sera minimizes the risk of antibody cross reaction with cells in culture.

MilliporeSigma Advantages:

- 30+ years of serum experience
- Testing with a lot-specific Certification of Analysis
- Lot-specific samples for validation with same lot reservation
- Breadth of serum products and origins to select from

Products Material Safety Data Sheets, CoA and CoQ, dossiers, and other documents are available upon request.
